# Pre-Concrete Placement Meeting Guidelines

## Introduction

The key to any successful concrete project is starting with a **Pre-Concrete Placement Meeting**. The purpose of the meeting is for all members of the concrete construction TEAM to understand the scope of the project and to discuss their roles in the project.

The meeting consists of a general outline for every aspect of the concrete construction. It is of the utmost importance to achieve general agreement on the items discussed to assure a successful project. Meetings of this type will produce a coordinated workflow, help to minimize problems, and when problems occur, make it easier to deal the issues.

All the members of a construction team should understand the importance of a Pre-Concrete Placement Meeting, and what types of issues should be addressed during the meeting. This manual was developed to give Project Members a consistent set of forms so that pre-concrete planning is thorough.

It should be mandatory that every participant in the concrete project attend and participate. No concrete project should begin placements without first having a pre-placement meeting. The manual is a guideline and each member of the team may have concerns that are not covered in this booklet.

Since the ready mix supplier is ultimately responsible for the performance of the concrete, the Advisory Council suggests that the supplier insist on a meeting prior to the first delivery.

## Required Attendees

The following team members shall attend the Pre-Concrete Placement Meeting. It is essential to the success of the Project that representatives from each of the following companies attend:

- ❑ Owner or owner's representative
- ❑ Structural Engineer
- ❑ Site Work Engineer
- ❑ Specification Writer
- ❑ Construction Manager
- ❑ General Contractor
- ❑ Concrete Contractor
- ❑ Ready Mix Supplier
- ❑ Placing and Finishing Contractor
- ❑ Concrete Pumping Company
- ❑ Testing Laboratory
- ❑ Admixture Supplier
- ❑ Other Specialty Product Suppliers (as appropriate for the Project)
  - Slag, Fly Ash, Coloring, Floor Hardeners, Fibers

*Notes:*

## General Discussion: Scheduling and Ordering

When will the job start? \_\_\_\_\_

When is the job scheduled for completion? \_\_\_\_\_

When is the first pour scheduled? \_\_\_\_\_

Will there be a test pour? \_\_\_\_\_

A designated washout area on the jobsite? \_\_\_\_\_

Describe the truck access to the jobsite. \_\_\_\_\_

\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

Any night, weekend, or holiday pours? \_\_\_\_\_

How much notice will be given to the following when scheduling a pour?

Concrete Producer \_\_\_\_\_

Finishing Contractor \_\_\_\_\_

Placement Contractor \_\_\_\_\_

Testing Agency \_\_\_\_\_

Other \_\_\_\_\_

Responsible/authorized party to order concrete? \_\_\_\_\_

Notice required by producer to accept order? \_\_\_\_\_

The policy for canceling/postponing order? \_\_\_\_\_

Will the following be compensated for pours cancelled at the last hour?

Testing lab \_\_\_\_\_

Pumping contractor \_\_\_\_\_

R/M producer \_\_\_\_\_

Finishing contractor \_\_\_\_\_

## Concrete Responsibility Matrix

Task	Engineer Architect	Testing Lab	Concrete Placement Contractor	Concrete Supplier	Material Supplier	General Contractor
<b>Specification Generation</b>	X					
<b>Specification Compliance</b>	X	X				X
<b>Mix Design and Approval</b>	X	X		X		
<b>Material</b> *Per Material Spec *Dispensing *Equipment *Product Delivery *Product Education *Followup					X X X X X	
<b>Plant Control of Mix</b>		X		X		
<b>Field Control of Mix</b>		X	X	X		
<b>Concrete on Site</b> *Placement *Finishing *Curing *Conformance per Spec			X X X X			X X
<b>Concrete Testing – Field</b> *Slump *Air Content *Strength *Handling *AASHTO T-227		X X X X X				

*Notes:*

## Mix Designs

Have the mix designs been approved?  Yes  No

Do the mix designs meet the specifications?  Yes  No

Does everyone understand specifications?  Yes  No

Who should have copies of the mix designs?  Yes  No

Have they received copies?  Yes  No

Are there approved mix designs for all of the different concrete applications that may be used on the project?  Yes  No

Air  Yes  No

Non-Air  Yes  No

Super  Yes  No

Fibers  Yes  No

Flowable Fill  Yes  No

Footings  Yes  No

Paving  Yes  No

Slabs  Yes  No

High Early Strength  Yes  No

Have mix designs been approved for placing concrete during extreme climatic conditions?  Yes  No

Will ice be required?  Yes  No

Will hot water be required?  Yes  No

Will the delivery time be affected?  Yes  No

Will the job benefit from the uses of the following:  Yes  No

Retarders?  Yes  No

Superplasticizers?  Yes  No

Accelerators?  Yes  No

Will the job be using any high performance concrete?  Yes  No

## Placing and Finishing

Remember, "All Concrete Cracks!" The goal of proper placing, finishing, jointing, and curing operations is to minimize unplanned cracking.

How will concrete be placed?

- Concrete Pump  
Type of pump \_\_\_\_\_  
 Boom pump  
 Trailer pump  
How many pumps used \_\_\_\_\_
- Crane and Bucket  
What size bucket \_\_\_\_\_
- Truck Chute \_\_\_\_\_
- Georgia Buggies  Wheelbarrows  
How many \_\_\_\_\_

Size of pours? \_\_\_\_\_

Precaution to not place fresh concrete against aged concrete?

- Yes  No

Type of finish required? \_\_\_\_\_

Finishing procedure? \_\_\_\_\_

Acceptance criteria for the finish? \_\_\_\_\_

Vibratory screed used?

- Yes  No

Subgrade type? \_\_\_\_\_

Placed on polyethylene?

- Yes  No

Is WWF being used?

- Yes  No

Plan of action to prevent surface evaporation in wind, low humidity, high temperatures?  
\_\_\_\_\_

Protection used?

- Wind break  
 Evaporation retardants  
 Fog misting  
 Other \_\_\_\_\_
- Yes  No

Has a joint pattern been established?

Joint spacing? \_\_\_\_\_

Specified joint depth? \_\_\_\_\_  
When will joints be cut? \_\_\_\_\_  
By what means are joints cut? \_\_\_\_\_

Have procedures been outlined and agreed upon for placing and finishing during extreme climatic conditions?  Yes  No

Are there any other special finishing considerations?  Yes  No

High performance concrete?  Yes  No

Floor hardeners?  Yes  No

Coloring?  Yes  No

Other? \_\_\_\_\_

All standard ACI recommendations should be followed!

To achieve good quality concrete it is best to always under-finish and over-cure!

## Testing (General Guidelines)

What is the sampling frequency? \_\_\_\_\_

What tests are performed on each sample?

Air  Yes  No

Slump  Yes  No

Concrete temperature  Yes  No

Unit weight  Yes  No

Compressive strength cylinders  Yes  No

Flexural strength beams  Yes  No

Other \_\_\_\_\_

Is measurement and unit weight of cylinders required prior to breaks?  Yes  No

How many technicians required to staff? \_\_\_\_\_

Technician duties? \_\_\_\_\_

If pumped, the location for sampling? \_\_\_\_\_

Number of cylinders per set? \_\_\_\_\_

Size of cylinders to be used? \_\_\_\_\_

How are the cylinders to be cured? \_\_\_\_\_

Are reserve cylinders required?  Yes  No How Many?

\_\_\_\_\_

Are AASHTO T227 (Coulomb) tests required?  Yes  No Max rating?

\_\_\_\_\_

Who will perform the rapid chloride permeability test? \_\_\_\_\_

How will cylinders be protected during the first 16 to 24 hours? \_\_\_\_\_

Who will provide the cylinder storage Box? (Re: ACI 301) \_\_\_\_\_

Who is responsible for maintaining temperature (60-80° F) in the curing box during first 16-24 (Note: ASTM C31 9.2.1)

hours after cylinders cast?

---

How will the temperature in the curing box be maintained?

---

When will test cylinders made on days preceding non-work days be transported to the lab?

---

Method of transporting cylinders to lab:

Rack?

Yes  No

Sand bed?

Yes  No

Other?

Yes  No

Will there be access to job site on non-work days?

Yes  No

Who has authority to reject a concrete delivery?

---

For what reasons may a concrete delivery be rejected, and when?

Air?

Yes  No

Slump?

Yes  No

Unit weight?

Yes  No

Temperature?

Yes  No

Time?

Yes  No

Other?

Can water or super be added at jobsite?

Yes  No What point?

---

Who has authority to make additions to concrete?

---

**Concrete test report distribution required?**

**We recommend that ALL project participants receive copies of the test data.**

Is statistical tracking of test data required?

Yes  No

Who is responsible for tracing statistics?

---

### Test Report Distribution

**To:** \_\_\_\_\_ **Date:** \_\_\_\_\_  
**From:** \_\_\_\_\_ **Job:** \_\_\_\_\_

I, \_\_\_\_\_, request that the above mentioned testing agency distribute copies of the concrete test reports to the following companies:

Company	Attention	Address
_____	_____	_____
_____	_____	_____
_____	_____	_____
_____	_____	_____

(Use reverse for additional space.)

The test reports shall be mailed within two working days from the time of the breaks. Questionable or failing breaks shall be reported to all of the above parties within 24 hours.

It is essential to the success of the project that all members of the concrete construction team have this information immediately. Thanks for your cooperation.

**Name:** \_\_\_\_\_ **Title:** \_\_\_\_\_  
**Company:** \_\_\_\_\_ **Phone:** \_\_\_\_\_

\_\_\_\_\_  
(Signature required)

# Testing of Hardened Concrete

In what situations will additional testing be required

---

How do the project specifications handle additional testing?

---

---

If additional testing is required, what is the procedure for notifying all parties involved?

---

What investigative procedures will be used and in what order?

---

---

---

---

Who will do the work and select them?

---

How will the test results be evaluated?  
Who will be responsible for fees associated with additional testing?

---

---

*Notes:*

## Curing and Protection Procedures

### ***“All Concrete Requires Curing!”***

What method of curing is acceptable? \_\_\_\_\_

How many days of curing are required? \_\_\_\_\_

What type of protection is required? \_\_\_\_\_

Who is responsible for curing and protection? \_\_\_\_\_

Wet curing, either with burlap, burlene, or soaker hoses is the most widely recommended and acceptable method of curing

To maximize concrete performance, and to help minimize drying shrinkage cracks; follow up the active wet curing with an application of curing compound.

If wet burlap is specified, the concrete must be protected against moisture loss up until the time of burlap placement. The burlap should then be placed as soon as the concrete can withstand the weight of the burlap without damaging the surface. It must be prewetted and maintained wet for the specified curing period.

All concrete must be protected against exposure to rapid changes in temperature or thermal cracking may occur. Recommendations as outlined in ACI 305, “Hot Weather Concreting and ACI 306,” and “Cold Weather Concreting” should be followed. All other applicable ACI recommendations also apply.

The use of burlap and poly can cause discoloration of the concrete.

Always begin curing as soon as the finishing operations have been completed.

# Planning Notes and Action Items

**Project Name** \_\_\_\_\_

**Meeting Date** \_\_\_\_\_

**Follow-up Meeting  
Date** \_\_\_\_\_

**Notes and Action Items:**
