

CASE STUDY

Reston Station Office Building Tower 1
Reston, VA

Completed: July 2017
Owner: Comstock Partners, LLC
Concrete Supplier: Vulcan Materials Company
Concrete Subcontractor: Miller and Long Concrete
Architect: Helmut Jahn
Structural Engineer: Thornton Tomasetti
General Contractor: James G. Davis Construction

When designing the 16-story office building, world-renowned architect Helmut Jahn envisioned a structure in which all the columns were non-traditional, not straight and intentionally visible. And that is exactly what the Reston Station OB Tower 1 showcases. Drive down the Dulles Toll Road and you can easily identify the building by the Xs that appear on its sides. This amazing structure contains over 18,000 cubic yards of concrete; 11,000 cubic yards being High Early Strength mixes. The project used over 4,000 cubic yards of 10,000 and 12,000 psi concrete, 400 of which was designed as self-consolidating concrete to meet the aesthetic requirements of Jahn.

Awards: National Capital Chapter ACI, Excellence in Concrete, Mid-High Rise Building Award 2017
ACI, Excellence in Concrete Construction, High-Rise Category, 2nd Place Award 2018
